

Strategic Suggestions for Slow-Moving & Overstocked Items

- **Reduce inventory of Electronics:** Electronics have high inventory days (~45 days) and relatively low margins (~13%).
- **Run targeted discounts:** Offer discounts on slow-moving products such as **Bluetooth Speakers, Headphones, Smartwatches, and Power Banks**.
- **Bundle products:** Combine slow-moving items with popular products to increase sales without heavily reducing prices.
- **Avoid over-purchasing:** Reduce future purchase quantities for products with consistently high inventory days.
- **Clear old stock:** Use promotional campaigns, seasonal offers, and clearance sales to convert excess stock into cash.
- **Improve demand forecasting:** Use historical sales and seasonal trends to plan inventory levels more accurately.
- **Prioritize high-margin products:** Increase inventory investment in **Beauty** and other high-margin products.
- **Monitor inventory regularly:** Track **Inventory Days, Stock Quantity, Sales Volume, and Profit Margin** together.
- **Seasonal planning:** Stock products before high-demand seasons and reduce inventory for products expected to have weak seasonal demand.
- **Set inventory thresholds:** Establish maximum stock levels and reorder points to prevent future overstocking.
